

PENNSYLVANIA CAN SEIZE THE FUTURE WITH THE REGIONAL GREENHOUSE GAS INITIATIVE (RGGI)

THE BENEFITS TO STATES THAT HAVE JOINED TO RGGI

RGGI WILL SLASH POLLUTION AND PROTECT OUR HEALTH

Carbon pollution contributes to climate change and harms our health. PA is the 5th largest carbon polluter in the country and the state's carbon emissions increased by 10% in the last year alone. RGGI cuts carbon pollution from power plants by 25%, saves lives, and provides a market-based path for these plants to reach CO2 reduction goals.

RGGI WILL INVEST IN PA COMMUNITIES, BUSINESSES AND WORKERS

RGGI will jumpstart the state's energy market transformation to new, clean, and home-grown technologies. It will create **30,000 Pennsylvania jobs** and boost the economy by nearly **\$2 billion**.

It will generate hundreds of millions of dollars every quarter for clean energy investments, job creation, and support for workers and communities impacted by the changing energy economy. RGGI proceeds can also be used to reduce consumer energy costs and protect vulnerable communities disproportionately harmed by pollution.

PENNSYLVANIANS WANT ACTION ON CLIMATE CHANGE & CLEAN ENERGY

Pennsylvanians know it's time to combat climate change and make our state a leader in the new energy economy. **More than 70% of Pennsylvanians support a program like RGGI to put a cap on power plant pollution.**

Pennsylvanians love what RGGI can offer a state like Pennsylvania that is ready for a safer, healthier environment for our kids, and family-sustaining, clean energy jobs for our communities. It is time for Pennsylvania to start benefiting in the same way the other RGGI states have done.

RGGI means cleaner air, better health, climate action, more jobs, and a PA that is poised to be an energy leader of the future.

RGGI: MORE JOBS, LESS POLLUTION, HEALTHIER COMMUNITIES
